	Personnel:	E. Moreau (Project manager and Security Designer)

Service Description: This client had a unique situation with securing the facility, but keeping the facility feeling like a sanctuary for its patients. We had to strategically place surveillance to cover entryways and public waiting areas. To reduce the footprint 360 and 180- degree cameras were used to cover open areas. Access control was provided throughout to secure areas that required patients to be escorted. An intrusion system was designed for the pharmacy to ensure they meet state regulations.
