	Services Provided:	Security (Video Surveillance)
	Type:	Security Consulting
	Construction Cost:	$145,000
	Personnel:	E. Moreau (Project manager and Security Designer)

Service Description: The client was looking for a unified video surveillance platform to manage their 600 plus video surveillance system. There were two challenges for this project that we had to overcome. First was the issue with the current cameras and their compatibility with the unified platform. A majority of the cameras Mercy had on campus were Mobotix, which did not work on all platforms. After some research we were able to find a solution that could incorporate the current cameras with the new cameras, all on the single platform. The second challenge was virtualization the video environment. We realized that the video systems did not like the way visualization tries to optimize the use of processing, so we wound up having the IT group pin the processors on the servers. This relieved the issues and the system is running per clients requirements.
